

**Optibelt OMEGA HP in double pack**

**Suitable for HTD® and RPP® pulleys**

Whereas other timing belts require special toothed pulleys, the Optibelt OMEGA high performance timing belt proofs full impact without missing a beat. The belt is equipped with optimised teeth and is therefore universally applicable for both pulley types. This way the experienced retailer can focus on just a single type of timing belt and thus can save not only time for otherwise occurring troublesome inquiries but also further storage areas, double stock lists and much more.

Furthermore the Optibelt OMEGA HP features the following extraordinary advantages:

- Significantly longer operational life than comparable timing belts by competitors
- Allows for more compact drive designs
- Extremely low stretching (especially OMEGA HL)
- Low noise operation
- High power transfer and performance

In independent tests – in laboratory conditions – with belts by competitors featuring equal performance ratings, and under the same conditions, the OMEGA HP has exhibited a much longer operational life even in heavy duty operation.

For this reason the Optibelt OMEGA HP is undoubtedly one of the most powerful and reliable timing belts in its performance class.

By the way:  
The Optibelt OMEGA HP is now also available in section STD®.
