Belt Characteristics Advantages

V-Belts *HVAC POWER*

HVAC Power Belts are built to fit the most demanding belt drives for small exhaust fans and blowers. The design of these units requires the use of a highly flexible V-belt because of the wide use of small variable pitch adjustable pulleys on the motors. HVAC Power is designed to transmit the power of a raw edge belt without the issue of pulley groove wear and belt noise. In addition the belt construction practically eliminates belt stretch and will operate under elevated ambient temperatures.

Sections: A/4L – B/5L

Dimensions: 20-47 inch (450-1150 mm) standard range, further sizes on request

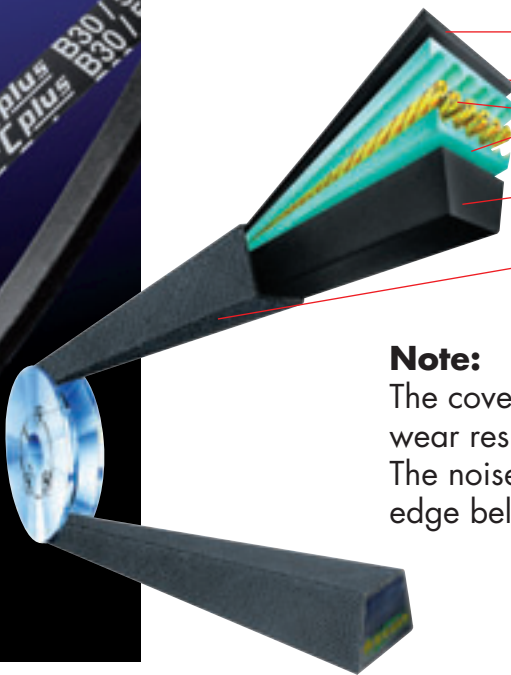

V-Grooved Pulleys: all standard pulleys, special pulleys on request

- **high flexibility and low flex fatigue**
- **extremely wear resistant**
- **temperature resistant**
- **minimal belt stretch**
- **smooth running**
- **S=C PLUS**

- CR-Rubber Compound
- Bedding Compound
- Special Polyester Cord
- CR-Rubber Compound
- 2 layers, special SSG cover fabric

Note:
The cover fabric is extremely wear resistant, flexible and abrasion-proof. The noise level is lower compared to raw edge belts.
