

# SUCCESS STORY

## DOUBLE-SIDED V-BELTS (DK)

### DRIVE SPECIFICATIONS

- Serpentine drive design.
- Matched set of 2 belts is required.

### INDUSTRY

Food Processing

### APPLICATION

Chicken Defeathering

### COMPANY PROFILE

Large poultry processing plant

### PROBLEM

A single poultry plant can process over a million chickens per week. The maintenance team had tried to use different manufacturer's belts to improve life but nothing reached the desired lifetime and getting a set of 2 belts to match was always a tall order.

### SOLUTION

Optibelt Double Sided V-Belts

### RESULTS

Optibelt's double sided v-belts lasted over 25% longer than the competition because of these design factors:

- Rubber impregnated fabric wrap.
- Transverse fiber rubber core provides increased durability and power transmission.
- Superior belt length tolerances made the set of 2 belts a perfect match.
