

SUCCESS STORY

HVAC POWER

INDUSTRY

HVAC

APPLICATION

Exhaust Fan

COMPANY PROFILE

HVAC service company

PROBLEM

Working with a distributor Optibelt approached one of the largest HVAC service companies in the US about improving the belt life on the exhaust fans at their facilities. The company agreed to test HVAC POWER on one of their more problematic fractional horse power fans on a residential tower.

SOLUTION

Optibelt HVAC POWER belts

RESULTS

HVAC POWER v-belts have an improved cover fabric which helps it to more effectively dissipate heat and gives it exceptional wear resistance making it more durable than standard FHP belts. HVAC POWER lasted 1.5X the life of the existing competitor belts when run side by side.

With a specially engineered rubber compound HVAC POWER belt combines the flexibility of a cogged belt with the durability of a wrapped belt.

The HVAC service company was so pleased with the belts performance that they converted all 25 fans at the residential tower to HVAC POWER and has opened the opportunity for this service company to use OPTIBELT at other locations.
