PROBLEM

These belts needed to be replaced every 6 months (on average) because of failing/slipping due to lack of proper maintenance and difficult accessibility.

SOLUTION

Optibelt RED POWER KraftBand

RESULTS

By directly replacing the existing belt with RED POWER, the AHU experienced a dramatic increase in belt life and performance. The switch also eliminated downtime during change out, which takes almost a full day to complete all 4 towers. Optibelt RED POWER v-belts have shown improvements in:

- 3X the life of a standard belt (operating continuously for over 18+ months).
- No re-tensioning maintenance due to the unique maintenance free feature.
- Cost savings of several thousand dollars a year per tower in maintenance and belt costs.
