

SUCCESS STORY

RED POWER

INDUSTRY

HVAC

APPLICATION

Compressors & Fans

COMPANY PROFILE

Large International Airport

PROBLEM

An airport's HVAC system used 5 single BX116 v-belts. The belts lasted for 6 months before needing to be replaced. Belt failure was due to poor alignment, high slip because the belts were not matched and there was no re-tension during their life.

SOLUTION

Optibelt RED POWER

RESULTS

Converted the drive from 5 BX belts to 4 RED POWER v-belts on this drive. Running 24/7 the RED POWER belts lasted for years compared with only 6 months for the BX belts.

The customer did not perform any preventative maintenance on the drive. With no maintenance the Red Power belts out performed the competition and were proved to be truly maintenance free.
