

# SUCCESS STORY

## RED POWER

**INDUSTRY**  
HVAC

**APPLICATION**  
Compressor

**COMPANY PROFILE**  
Pharmaceutical production plant

### PROBLEM

Two compressors maintain a 150 KPA pressure for the production of baby formula and belt slip will compromise the production causing 16 hours of downtime for belt maintenance and equipment decontamination.

### SOLUTION

Optibelt RED POWER V-belt

### RESULTS

Customer's preventative maintenance schedule was to check belt tension 3 times per day. With Optibelt's RED POWER v-belts the inspection frequency decreased to once per day. The original belts were changed each month but with RED POWER the first set of belts has lasted over 1 year greatly reducing the amount of preventative maintenance that used to be required for this drive.
