

SUCCESS STORY

RED POWER

DRIVE SPECIFICATIONS

300 HP

INDUSTRY

Pulp and Paper

APPLICATION

Vacuum Pumps

COMPANY PROFILE

This plant manufactures sustainable packaging

PROBLEM

The vacuum pumps are essential to the production process of paper goods and the manufacturer was investigating ways to minimize costs and increase uptime. Their current belts were stretching and failing prematurely.

SOLUTION

Optibelt Red Power

RESULTS

With Red Power being produced to the $S=C+$ length tolerance the user no longer had to worry about ordering extra belts to find belts within tolerance to use on the same drive.

Red Power also eliminated re-tensioning of the drive during its life due to the fact that the belt will not stretch over time like a standard v-belt.

Both of these combined to reduce preventative maintenance cycles on the drive and increase uptime.
