

SUCCESS STORY

RED POWER

DRIVE SPECIFICATIONS

- V-belt drive with Red Power 10-8V3550

INDUSTRY

Pulp and Paper

APPLICATION

Vacuum Pump

COMPANY PROFILE

Paper Processing Plant

PROBLEM

Belts in these drives were not lasting longer than 7 months and were requiring maintenance every 3 months which was costing the company a significant amount of money in belt spend, labor costs, and downtime.

SOLUTION

Optibelt RED POWER 10-8V3550

RESULTS

After installing Optibelt's RED POWER belts the drive ran for over 2X the life of the competition without failure.

The RED POWER belts have saved the company time and money due to the following factors:

- Maintenance-free belt that does not require re-tensioning over the lifetime which means fewer inspections and no downtime due to re-tensioning.
- S=C plus length tolerances require no matched sets, which means reduced inventory and improved efficiency and performance.
